

Modulbezeichnung: Stundenplankürzel: <i>(Title)</i>	G4: Physics Physics
Modulverantwortliche(r): <i>(Module responsibility)</i>	Prof. Dr. rer. nat. Markus Mauerer
Dozent(in): <i>(Course teachers)</i>	Prof. Dr.-Ing. Jörg Elias Prof. Dr. rer. nat. Markus Mauerer Prof. Dr. rer. nat. Matthias Rebhan Part time lecturers
Sprache: <i>(Language of instruction)</i>	English
Zuordnung zum Curriculum: <i>(Degree programme)</i>	Bachelor Engineering and Management 2nd Semester
Lehrform/SWS: <i>(Teaching method / Hours per week (SWS))</i>	Seminar-like lecture / 4 SWS
Arbeitsaufwand: <i>(Workload)</i>	Presence time for lectures and exercises: 60 hours Self-studies, preparation of lectures and exam: 90 hours
Kreditpunkte: <i>(Number of ECTS credits)</i>	5 ECTS
Voraussetzungen: <i>(Prerequisites)</i>	Basic knowledge of differential and integral calculus, as well as vector algebra
Verwendbarkeit: <i>(Usability)</i>	The module uses mathematical methods and thus builds on the contents of the module engineering mathematics 1 (Mathematik 1). Basic knowledge for various technical modules of higher semesters is imparted, in particular for the module "Energietechnik" (energy technology).
Lernziele/Kompetenzen: <i>(Course objective)</i>	Competence Level 1 „Know“: <ul style="list-style-type: none">• The students know the basic laws of physics.• The students understand the importance of physics as the scientific basis for the work of an engineer. Competence Level 3 „Apply“: <ul style="list-style-type: none">• The students can solve physical problems by calculations.• The students are able to investigate optional technical innovations in view of physical laws. Competence Level 4 „Analyse“: <ul style="list-style-type: none">• The students can systematically analyse physical-technical problems by recognizing, formulation and application of basic laws and transformation into mathematical language.
Inhalt: <i>(Course content)</i>	Mechanics: <ul style="list-style-type: none">• kinematics of a point mass• free fall and inclined throw

	<ul style="list-style-type: none"> • motion in 3 dimensions • cyclic motion • dynamics of a point mass – Newton´s laws • momentum and conservation of momentum • forces • work • energy and energy conservation • power • dynamics of rigid bodies <p>Thermodynamics:</p> <ul style="list-style-type: none"> • the ideal gas model • laws of thermodynamics • enthalpy and useful work • entropy • ideal cyclic processes of ideal gases • real gases, example: water • gas-vapour mixtures, example: moist air
Prüfungsform: <i>(Assessment method)</i>	Written Exam in presence Duration: 90 minutes
