

<b>Department</b>	07 Computer Science and Mathematics
<b>Course title</b>	<b>Ethical Hacking</b>
<b>Course number</b>	
<b>Hours per week (SWS)</b>	4
<b>Number of ECTS credits</b>	5
<b>Course objective</b>	<p>The domain of attacks on IT systems is very broad. Various technical and personal competencies can be derived from this</p> <p>Technical Competencies</p> <ul style="list-style-type: none"><li>- Assess a vulnerability in the current system context</li><li>- Reflect on the results and develop a solution strategy</li><li>- Apply broad computer science knowledge to a specific problem</li><li>- Analyze processes and identify vulnerabilities</li></ul> <p>Personal competencies:</p> <ul style="list-style-type: none"><li>- Focus on one topic</li><li>- Work on a topic with persistence</li><li>- Learn to deal with setbacks</li><li>- Develop different approaches to the same problem</li><li>- Take other people's point of view and evaluate their situations</li><li>- Find arguments for own point of view</li><li>- Take other people's point of view and evaluate their situations</li><li>- Find arguments for own point of view</li></ul>
<b>Prerequisites</b>	
<b>Recommended reading</b>	<p>Jon Erickson, Hacking - The Art of Exploitation, ISBN-13: 978-1593271442 Frank Neugebauer, Penetration Testing mit Metasploit, ISBN-13: 978-3898648202 Dominic Chell, The Mobile Application Hacker's Handbook, ISBN-13: 978-1118958506 Jayson E. Street, Dissecting the Hack: The F0rb1dd3n Network, ISBN-13: 978-1597495684</p>
<b>Teaching methods</b>	
<b>Assessment methods</b>	oral exam, written exam or term paper
<b>Language of instruction</b>	English
<b>Name of lecturer</b>	Prof. Dr. Peter Trapp
<b>Email</b>	peter.trapp@hm.edu
<b>Link</b>	
<b>Course content</b>	<p>Ethical hacking refers to legal attacks on IT systems in order to check and strengthen their security. This also includes red-teaming, responsible disclosure or penetration tests.</p> <ul style="list-style-type: none"><li>- Basic terminology, classification and structure of ethical hacking</li><li>- Review of common defenses in a corporate context</li><li>- Design of the legal basis for penetration testing</li><li>- Design and structure of penetration tests</li><li>- Penetration testing procedures</li><li>- Attack types and vectors against systems</li><li>- Evaluation of the attack strength as well as execution of the attacks in the selected strength</li><li>- Social Engineering / Phishing-Attacks</li><li>- Attacks against IT systems as a whole</li><li>- Attacks against individual components of a system</li><li>- Tool based attacks</li><li>- Horizontal and vertical privilege escalation</li><li>- Command and control infrastructure for penetration of whole networks</li><li>- Bypassing security barriers</li></ul>
<b>Remarks</b>
